PROFILE STATEMENT

Computer Science graduate and Backend Developer with a strong foundation in building secure, scalable and maintainable software systems. Experienced in translating product requirements into reliable backend features, working across authentication, data persistence, real-time functionality and production-ready services. Known for ownership, clear communication, fast learning and a problem-solving mindset, with a strong interest in building intelligent systems that solve practical real-world problems.

EXPERIENCE

RenderLab

June 2025 – Present

Back End Developer

Dhaka, Bangladesh

- **Backend Development:** Built and maintained RESTful APIs with Django and Spring Boot, covering user management, authentication, Nginx-based load balancing, payment integration and core product features.
- **Data & Persistence:** Designed and refined relational schemas in PostgreSQL, implementing indexing, query optimization and efficient data modeling, and used Firebase for data storage and real-time features such as chat and live updates.
- **Security & AI Features:** Built secure backend systems with authentication, RBAC, session management, and rate limiting; integrated ML-driven features, including retrieval-augmented generation (RAG), into production services.
- **Team Collaboration:** Collaborated with UI/UX and QA teams to ensure smooth development workflow.

Mongol Tori

Oct 2022 – Dec 2023

Research & Documentation

Dhaka, Bangladesh

- Worked on producing research for the main rover and documented it as well to produce a valid research
- Collected and analyzed performance data from rover sensors to improve autonomous navigation.
- Maintained versioned datasets and documented insights for the research team.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, JavaScript, Typescript, Dart
- **Frameworks:** Flutter, Spring Boot, Django, Flask, Express, NextJs, React
- **Database Management:** PostgreSQL, SQLite, MySQL, Firebase, MongoDB
- **AI & Data Tools:** Hugging Face, Redis, Langchain, PyTorch, Scikit-learn, Pandas, Matplotlib, Power BI
- **Tools:** Git, Docker, LM Studio, Postman, Linux, Virtual Machines, Arduino

EDUCATION

BRAC University

Jun 2021 – Jan 2026

Bachelor of Science in Computer Science

CGPA 3.07

Rajarbagh Police Line Uchcha Madyamic Bidyalaya

Jul 2018 – Dec 2020

Higher Secondary Certificate

GPA 5.00

PROJECTS

- **ScholarsHub:** Full-stack academic research portal using React, Spring Boot and PostgreSQL, featuring secure authentication, role-based access, PDF upload/document management, group collaboration and real time chatting. Includes AI powered summarization and chatting with uploaded research materials or documents.
- **UMate:** Cross-platform academic life companion built with Flutter, Dart and Firebase, offering friend lists, real-time chat, schedule planning and sharing, academic deeplinks and creating notes, with a focus on smooth mobile/desktop usability and real-time collaboration.
- **InvenMan:** Local-first inventory and sales management app built with Flutter, Dart and SQLite, supporting product CRUD, stock tracking, direct/installment sales, customer records, warranty tracking, profit calculation, searchable activity history and backup/restore on Android, Windows and Linux devices.
- **AniFlix:** Full-stack anime streaming platform built with Django, JQuery and SQLite, including Google login, user profiles, bookmarks, genre browsing, event registration, structured content management with dedicated admin panel, shop/cart/order flows as well as SSLCommerz payment gateway for a complete media-style web experience.
- **BloodAid:** Flask-based blood donation platform designed to manage donor profiles, donation posts, campaign information and searchable donor records, with encrypted SQLite storage for sensitive user data and practical workflows for matching donors with requests.
- **AnonChat:** Privacy-focused real-time chat app built with React and Firebase, featuring anonymous account, live messaging and browser-based end-to-end encrypted conversations, designed around secure communication without exposing personal identity. All data on the system are encrypted via asymmetric encryption.
